

A CONVENIENT IMPROVEMENT FOR YOUR HOME

KONE Motala™ 2000 Home platform lift

It's natural for people to want to live in their own homes. But for many, stairs are a barrier. The alternative - a lift in a private home - is often not possible for reasons of space.

Now it's possible

The KONE Motala 2000 Home platform lift is the most space efficient home lift on the market. It gives more platform space for a given shaft footprint, about 20% more than the competition. The shaft takes as little as 1150 x 950 mm. At slightly more than one square meter, this is the size of a closet.

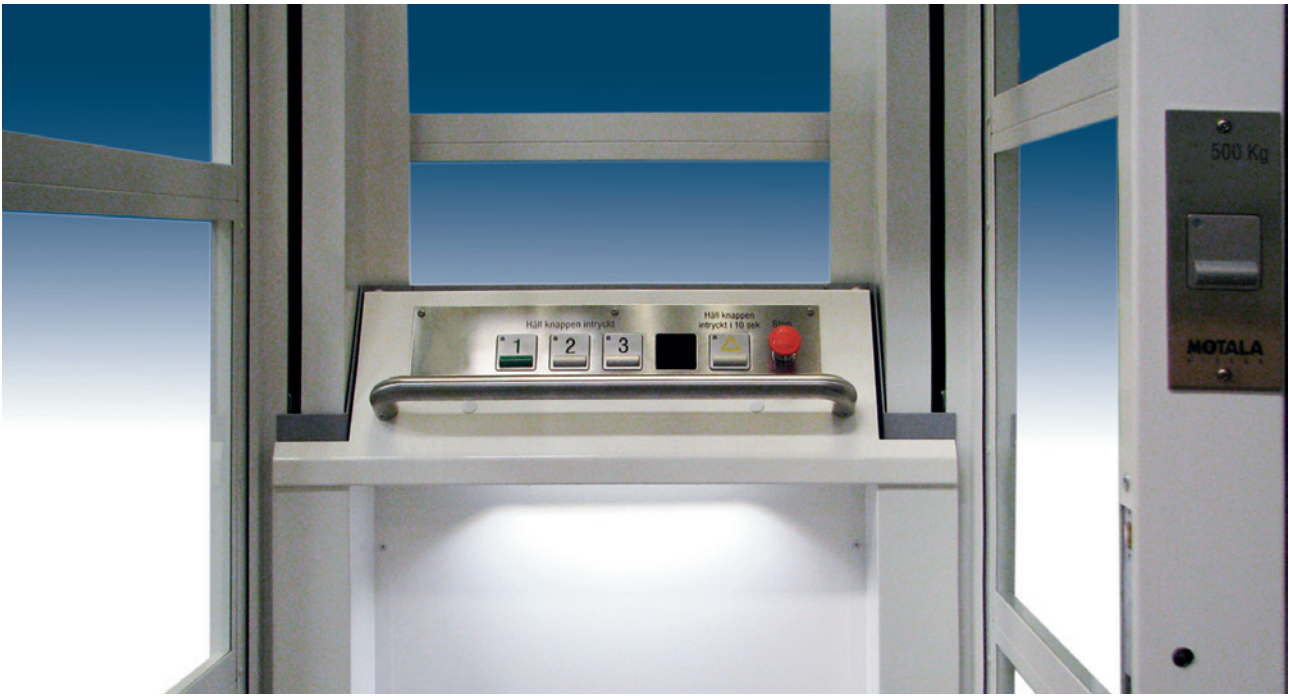

An attractive home improvement

The KONE Motala 2000 Home lift offers several attractive aesthetic options. A glass shaft gives a feeling of space and light, and oak details and a stainless steel control panel can be attractive features in any home.

The most space-efficient solution on the market

| Shaft dimensions (mm) | Platform dimensions (mm) |
|-----------------------|--------------------------|
| 1150 x 950 | 1020 x 870 |
| 1250 x 950 | 1120 x 870 |
| 1350 x 950 | 1220 x 870 |

The KONE Motala™ 2000 Home lift is easy to use, with large buttons and a simple control panel.

Safe and reliable

The KONE Motala 2000 Home uses guided chains for lifting, resulting in greater safety and reliability.

Compact size

Taking as little as 1.09 m², the KONE Motala 2000 Home is the most space-efficient solution on the market.

Elegant design

Oak can be used in the details and the sides of the shaft can be fitted with glass.

User-friendly

Large legible buttons are combined with the control panel's simple, logical design.

Environmentally-friendly

The engine power (0.55kW) required is about a quarter of what equivalent lifts might use.

Fast installation

Our experienced technicians can carry out the complete installation of a KONE Motala 2000 Home within a few days.

In just a few days, you could have a safe, compact lift in your home.
